

KMT MAINTENANCE PROGRAMS KEEP WEAR UNDER CONTROL

KMT Genuine Service
Your business is worth it.

Maintaining your Waterjet equipment in top operating condition is important to ensure optimal efficiency. The KMT Genuine Service Maintenance Program will positively impact your business as regular inspections and proactive maintenance of your high pressure pumps will save you both time and money by improving the pump's overall performance.

Our Services in Detail

Regular Service Intervals

- We service your pump at planned appointments and exchange parts where necessary. Therefore, you can prevent unexpected production downtimes as well as stressful repair works and produce more output in the time saved.
- The service intervals are adjusted to your specific operating conditions and are planned on long-term. If the conditions change, we will gladly adapt your maintenance agreement accordingly.
- For your flexibility, you can reschedule the service appointments with a prior notice of two weeks.
- The costs for the regular maintenance works are transparent thus enabling your reliable cost planning.

Qualified advice for your production safety

- In addition to the **scheduled maintenance works**, we check your system with a list, and you receive a **written maintenance report** for your documentation.
- If necessary, our experienced employees recommend further actions to assure the **long-term availability of your waterjet system**. It is up to you to decide if you would like the works to be carried out immediately (if possible), at the next scheduled appointment or at an additional service visit.
- For your production safety, we grant **complete warranty** on all parts we exchanged and maintained scheduled or unscheduled.

Additional benefit for you

- Our employees regularly check on your system and are familiar with your specific requirements. We know what is important for you.
- Our employees visit you in regular intervals thus being able to identify gradual deviations of your pump's performance, which might be missed in everyday operations.
- Our employees have knowledge of many different waterjet applications. Therefore, they can often provide you with up-to-date and helpful advice on how to optimize the operation of your waterjet cutting system.
